Terms and Conditions - The MirBSD Korn Shell

=====

The MirBSD Korn Shell (mksh) consists of a number of "source" files, which are provided by upstream in a number of places. This file will list the files belonging to mksh or being part of it and the licence terms and conditions that apply to them, in one single central place for packagers' convenience. This list aims to be authoritative. (Yet as it was compiled by a human, there may be bugs, please report them if any are found. We don't think so though.)

All paths are relative to The MirOS Project's CVS repository.

The following files form The MirBSD Korn Shell R59b:

- build system

All of these files are covered by The MirOS Licence (Appendix A) except the application icon resource, the terms for that are listed in Appendix D. Width data comes under those in Appendix E.

The creator of mksh acknowledges the contributions of several people to the Public Domain Korn Shell as well as suggestions and work from packagers, other developers etc. and everyone else who helped making mksh what it is today. Thanks! The MirBSD Korn Shell is sublicensed under a copyright licence fallback from the original pdsh author.

The following files belong to mksh and are distributed inside of its distfile, but are not part of it. They are provided for convenience, because they are required on many operating environments for mksh or some of its features to function:

- source code
- * mksh/strncpy.c (needed if not provided by the OS already)

These files are covered by separate licences in addition (Appendix C for now). Some operating environments already provide their functionality, such as the BSDs and OSX libc, or the Debian/freedesktop.org libbsd package. The files are not compiled into the resulting binary if their respective functionality is already provided.

The following file is not part of mksh but can be used with it; it's also not included in the mksh distfile:

- source code
- * src/usr.bin/printf/printf.c (UCB printf(1) utility that has been slightly modified, for an optional built-in printf, to be included for lksh-as-/bin/sh only and only when necessary)

The printf.c file is covered by the UCB three-clause BSD licence, as shown in Appendix B below.

The MirOS Licence also applies as a collective-work copyright on The MirBSD Korn Shell, an authorised derivate of the 1980s Public Domain V7/Bourne Shell.

Note that these appendices may represent the terms and conditions of more than one file, hence the actual wording of the files was folded into one representation, with different copyright holders and years, separated if merging was undesirable.

=====

The application icon resource comes in its preferred form of modification and is an unregistered trademark:

Copyright (c) 2013 Michael Langguth
Copyright (c) 2006 Benny Siegert
Copyright (c) 2005 mirabilos

This icon may be used to refer to The MirBSD Korn Shell and its Win32 port. Distribution patches are acceptable as long as they modify \$KSH_VERSION according to the guidelines that are published on the website; forks and works that are not derivatives are not allowed to use it.

As far as MirBSD is concerned, the files themselves are free to modification and distribution under BSD/MirOS Licence, the restriction on use stems only from a need to protect it or lose it: <http://www.mckusick.com/beastie/mainpage/copyright.html>

The Shilouette daemon is Copyright (c) 2003 by Rick Collette. The MirOS Project may freely use the former ekkoBSD Logo, the shilouette Daemon, for MirBSD, on anything the project leader sees fit, so long as it pertains to MirBSD in some way and the leader gives credit for the original daemon to Marshall Kirk McKusick.

The BSD daemon is Copyright (c) 1988 by Marshall Kirk McKusick. All Rights Reserved. Individuals may use the daemon for their personal use within the bounds of good taste. When reasonably possible, the text shown above is to be included.
